

SpeakUp 2018-19

The research tool districts use to learn what students, educators, and parents have to say about education issues!

Open through January 31, 2019

The Speak Up Research Project for Digital Learning is both a national research project and a free service to schools and districts everywhere. In addition to the annual research tools schools and districts have been using for 15 years, Project Tomorrow is now offering **two new Snapshot tools!**

Mobile Learning Impact Snapshot

While there has been huge growth in technology investments in schools, relatively few schools or districts have conducted a comprehensive **evaluation of the impact of mobile devices** in the classroom. Building on more than a decade of evaluation studies and insights from Speak Up, this new Snapshot is a research-based tool designed to help school leaders get beyond just “student engagement” as a level of success (or failure) of their mobile learning initiatives to better explain the ROI of their investments.

The Mobile Learning Impact Snapshot includes 15 questions for students and 15 questions for teachers. Data guides and templates will be available to help interpret and share the data.

Teacher Professional Learning Snapshot

While teachers are using more digital content than ever before and have greater access to digital tools including mobile devices in their classroom than ever before, there still is a gap between usage and effectiveness. And, teachers tell us they need and want more **professional learning** experiences to be able to **use technology more effectively**. This new Snapshot tool allows administrators to learn more from their teachers about their preferences and interests in professional learning experiences to support more effective use of technology.

The Professional Learning Impact Snapshot includes 15 questions for teachers. A data guide will be available to help interpret the data and inform local PD planning.
